

AMENDMENTS TO THE ABSTRACT:

Please amend the Abstract as follows:

ABSTRACT OF THE DISCLOSURE

A Uniform Resource Locator (URL) includes an identifier part that identifies the URL as being for a resource on a circuit-switched network, a service parameter part and an address part. A terminal reads on the URL and establishes a connection to the resource. Properties of the connection, such as the bandwidth or the connection topology, are determined by values of service parameters in the service parameter part.
